

Mt Annan Christian College Decant Classrooms

Education

Mount Annan Christian College required the installation of 10 BAL 12.5 compliant classrooms and associated access to decant students during their capital works project.

ATCO assisted the school in determining a suitable location for the installation and associated access that was installed over the 2024 Christmas school holiday period for classrooms to be ready for use on day one of the 2025 school year.

A post and rail system was employed to install the buildings on the school oval, reducing the time of the original proposed methodology of in ground concrete footings and expediting the overall delivery program. Additional changes were also made to the roof frame to allow for the installation of solar panels.

Snapshot

Location: Mount Annan, NSW

Date: December 2024

Client: Mount Annan
Christian College

Features:

- » 10 classrooms
- » DDA compliant ramp and stair access
