

Mount Ommaney Special School Classrooms

Education

"Working with the ATCO Team was a pure joy. So organised. Communication was second to none and any little problems were so easily dealt with. Can't wait to work together on the next project."

Sarah Hansen
Mount Ommaney Special School

The Mount Ommaney Special School project showcases ATCO Structures ability to provide earth works and installation of a functional learning space within the constraints of existing school infrastructure and with limited disruption to the school's daily function.

The project site required excavation and construction of a 30 m retaining wall to facilitate the foundations of the new facilities. All works took place during the school term with high-noise or disruptive activities scheduled for weekends or off-peak times. Temporary barriers and clear signage were utilised to separate construction zones and minimise impact on the school community.

The project was completed on time, within budget, and without any significant safety incidents demonstrating expertise in flexible project management, effective stakeholder coordination, and adherence to safety and quality standards.

Snapshot

Location: Mount Ommaney, QLD

Date: January 2024

Client: Queensland Department of Education

End Client: Mount Ommaney Special School

Features:

- » Four classrooms
- » Two amenities blocks
- » PWD access ramps and decks
