

Guardian Childcare Facility Extension

Education

To accommodate an additional 40 children and nine staff ATCO Structures worked with Jeckra Maintain Pty Ltd to design, manufacture, and install a standalone modular building to extend the existing childcare facilities at Guardian Childcare in Sherwood, Queensland.

This energy efficient and sustainable permanent modular building measuring at 18.0 m x 14.4 m (259.2m²) includes open-plan general learning areas, a sleeping area, a food preparation kitchen, and bathroom/nappy change amenities.

High-quality fittings and fixtures were used to fit out the building featuring recessed ceilings and timber look floors creating a bright and open space that is easy to clean.

In addition to manufacturing and installation ATCO provided connections to all utilities and landscaping as part of the scope of work.
